DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,2,6, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Dent(US 5,983,077 new cite).

The reference by Dent et al disclose a PLL circuit, see figure 2, with an analog modulation signal input(output of 105), and a digital modulation signal input(via 104), comprising the two-point modulation.

A summation point(receiving the analog mod signal(from 105) and error control signal from (102)) is shown coupled to the input of the VCO, and a feedback path is shown with divider(freq. Divider). A trimming device(including scaling(104)) is shown, see figure 2, with an evaluation means(200) and controller/DAC(105) for modulating the analog modulation signal(via direct modulation signal). The charge pump is inherent in the loop(see col. 5, line 4) and the LPF(101) is connected down stream of the PFD and charge pump. The method steps being inherent.

Allowable Subject Matter

3. Claims 3,4,5, 8, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The examiner could not find fair suggestion for comparing the signal characteristic of the error control value with a fixed reference value ...
